Benefits of Image 3

extra
low position

28_{cm}

- Support for independent mobilisation
- Unique modern design hand in hand with high comfort

Patient

- Sophisticated ergonomics
- Automatic preset functions
- Easy bed hygiene

Staff

- Universal use – standard, bariatric and washable version
- Variable solution to meet the needs of individual clients
- High standard of infection control

Management

Meeting everyone's needs

Image 3 WASHABLE

The bed is available in a version suitable for cleaning and disinfection in automatic hospital washing machines.

- The bed construction undergoes a special technological modification that increases its service life and durability.

WASHABLE
FRIENDLY

Image 3 STANDARD

The modern design of the Image 3 bed will find its universal use in hospitals.

- By choosing the version, design and accessories, the bed can be adapted for a specific purpose.
 - The attractive design of the bed helps to create a comfortable and pleasant environment in health facilities.

Image 3 Bariatric

Bariatric version of Image 3 meets the growing demand for beds with higher load capacity.

- The bed has a wider mattress platform.
- The safe working load is increased to 320 kg.

HOSPITAL
DESIGN

EXCLUSIVE
DESIGN

UNIVERSAL
DESIGN

The design of the bed is timeless and suitable for a broad spectrum of needs in hospital care. Image 3 Standard, Washable and Bariatric fully respect the highest ergonomic principles in healthcare.

Due to its classic concept, the hospital design suits standard healthcare practice and in addition offers a version specially adapted for cleaning in automatic hospital washing machines.

The exclusive design is enhanced by a combination of aluminium elements and wooden decors. The elegant look has a comforting effect and creates a pleasant environment for both the patients and staff.

The simple design offers a compromise of the bed's unique practical features in an economic version.

Patient safety

Safety is a key parameter for the Image 3. All the bed's functions are designed so that the patient can not just feel, but really be as safe as possible.

Ergoframe®

The Ergoframe® system extends the mattress platform in the pelvic area and reduces the pressure load on the tissues in this region when a patient is positioned in the cardiac chair position.

Functions lock

The electrical functions of the bed can be simply locked.

BRAKE Alarm :))

Brake alarm

The bed automatically emits a audible signal when the bed is left unbraked while the main power cable is connected.

GO Button

Pressing the 'GO' button activates the control panel for a period of up to 3 minutes from the last push. The controls are therefore locked during periods of inactivity and cannot be accidentally activated.

SafeFree[®] siderails

4 different adjustable heights of siderails. No required additional space beside the bed folding. Covered full length of bed sides.

SafeSense

The SafeSense bed exit alarm warns the staff when the patient leaves the bed.

3-STOP strategy

EXAMINATION
POSITION

MOBILISATION
POSITION

EXTRA LOW
POSITION

Examination position

- The highest bed position provides the staff with ideal ergonomic conditions for work.
- Comfortable nursing procedures and care.
- The position provides complete access to the bed for cleaning and disinfecting.

80
cm

Mobilisation position

- Preset functions on the control panel for simple mobilisation.
- In combination with the siderail handle, the position simplifies and supports the mobilisation of the patient.
- The ideal setting for cleaning in an automatic hospital washing machine.

40
cm

Extra low position

- Separate button as a preset function on the control panel.
- Safe position for sleeping.

28
cm

Practical details

- 1 5th castor
facilitates comfortable handling in all spaces.
- 2 Bed extension
The mattress platform width offers great comfort to all patients. Thanks to the built-in bed extension even taller patients will feel very comfortable.
- 3 Night light
for the patient's safe orientation.
- 4 3D corner bumpers
protect the bed in a horizontal and vertical position.
- 5 Mattress platform width
optional mattress platform width 86 or 90 cm with removable plastic parts.
- 6 Linen shelf
may also be used to store the supervisor panel.
- 7 Mechanical CPR
for emergency use.
